

## SM2H 9.1N – Degrees and Radians

Fraction Review:

$$1. \frac{2\pi}{5} \cdot \frac{1}{4} = \frac{2\pi}{20} = \frac{\pi}{10}$$

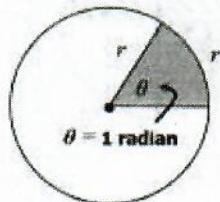

$$2. \frac{3\pi}{8} \cdot \frac{4}{\pi} = \frac{12\pi}{8\pi} = \frac{3}{2}$$

$$3. \frac{5x}{3} - \frac{x}{4} = \frac{20x}{12} - \frac{3x}{12} = \frac{17x}{12}$$

$$4. \frac{\pi}{6} + \frac{\pi}{3} = \frac{\pi}{6} + \frac{2\pi}{6} = \frac{3\pi}{6} = \frac{\pi}{2}$$

\* can simplify diagonals first.

Radians vs.  
Degrees

A radian is a unit of angle measure based on arc length.

One radian is defined as the measure of the angle formed when the radius is equivalent to the length of the intercepted arc.

Recall that the circumference of a circle is  $2r\pi$ , therefore:

$$360^\circ = 2\pi \text{ radians}; 180^\circ = \pi \text{ radians}$$

Converting Degrees → Radians

Converting Radians → Degrees

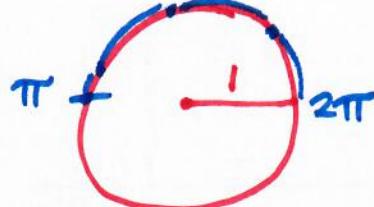

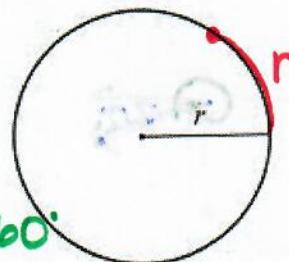

$$\text{Radians} = \text{Degrees} \cdot \left( \frac{\pi \text{ radians}}{180} \right)$$

$$\text{Degrees} = \text{Radians} \cdot \left( \frac{180}{\pi \text{ radians}} \right)$$

\* What is a radian? [https://commons.wikimedia.org/wiki/File:Circle\\_radians.gif#/media/File:Circle\\_radians.gif](https://commons.wikimedia.org/wiki/File:Circle_radians.gif#/media/File:Circle_radians.gif)

$$\pi \text{ radians} = 180^\circ$$

$$2\pi \text{ radians} = 360^\circ$$

Convert each degrees to radians and radians to degrees:

$$1. 45^\circ \cdot \frac{\pi}{180^\circ} = \frac{45\pi}{180} = \boxed{\frac{\pi}{4}}$$

$$2. \frac{2\pi}{3} \cdot \frac{180^\circ}{\pi} = \frac{360}{3} = \boxed{120^\circ}$$

$$3. -\frac{11\pi}{6} \cdot \frac{180^\circ}{\pi} = -\frac{1980}{6} = \boxed{-330^\circ}$$

$$4. -935^\circ \cdot \frac{\pi}{180^\circ} = \boxed{-\frac{187\pi}{36}}$$

$$5. \frac{7\pi}{4} \cdot \frac{180^\circ}{\pi} = \frac{1260}{4} = \boxed{315^\circ}$$

$$6. 80^\circ \cdot \frac{\pi}{180^\circ} = \boxed{\frac{4\pi}{9}}$$

## Coterminal and Reference Angles

A. Shade the appropriate portion of the semi-circle.

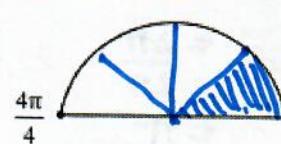

1.  $\frac{1}{3}$

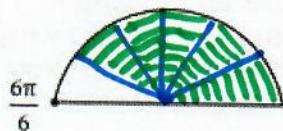

2.  $\frac{2}{5}$

3.  $\frac{\pi}{4}$

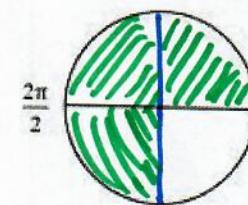

4.  $\frac{5\pi}{6}$

5.  $\frac{9\pi}{8}$

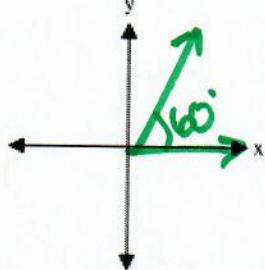

6.  $\frac{3\pi}{2}$

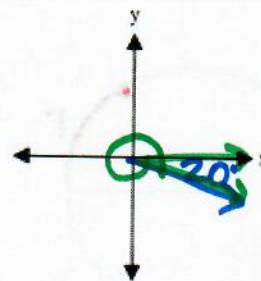

B. Drawing Angles

- Draw and Label the Given angle.
- Draw and Label the *reference angle*. (Remember- A reference angle is formed by the *terminal side* of the angle and the *x-axis*. This means the angle will always be less than 90°.)

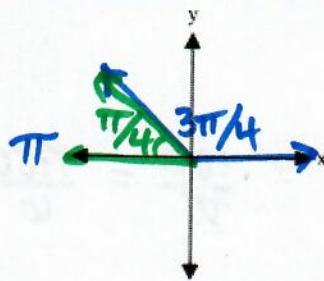

1.  $60^\circ$

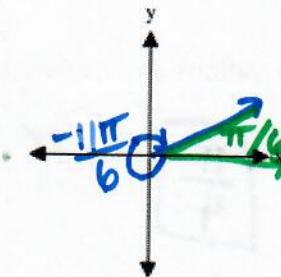

2.  $-380^\circ$

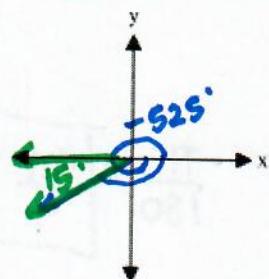

3.  $\frac{3\pi}{4}$

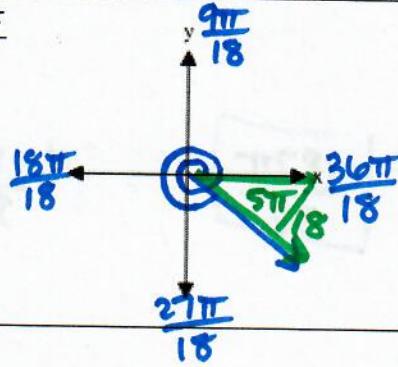

4.  $-\frac{11\pi}{6}$

5.  $-525^\circ$

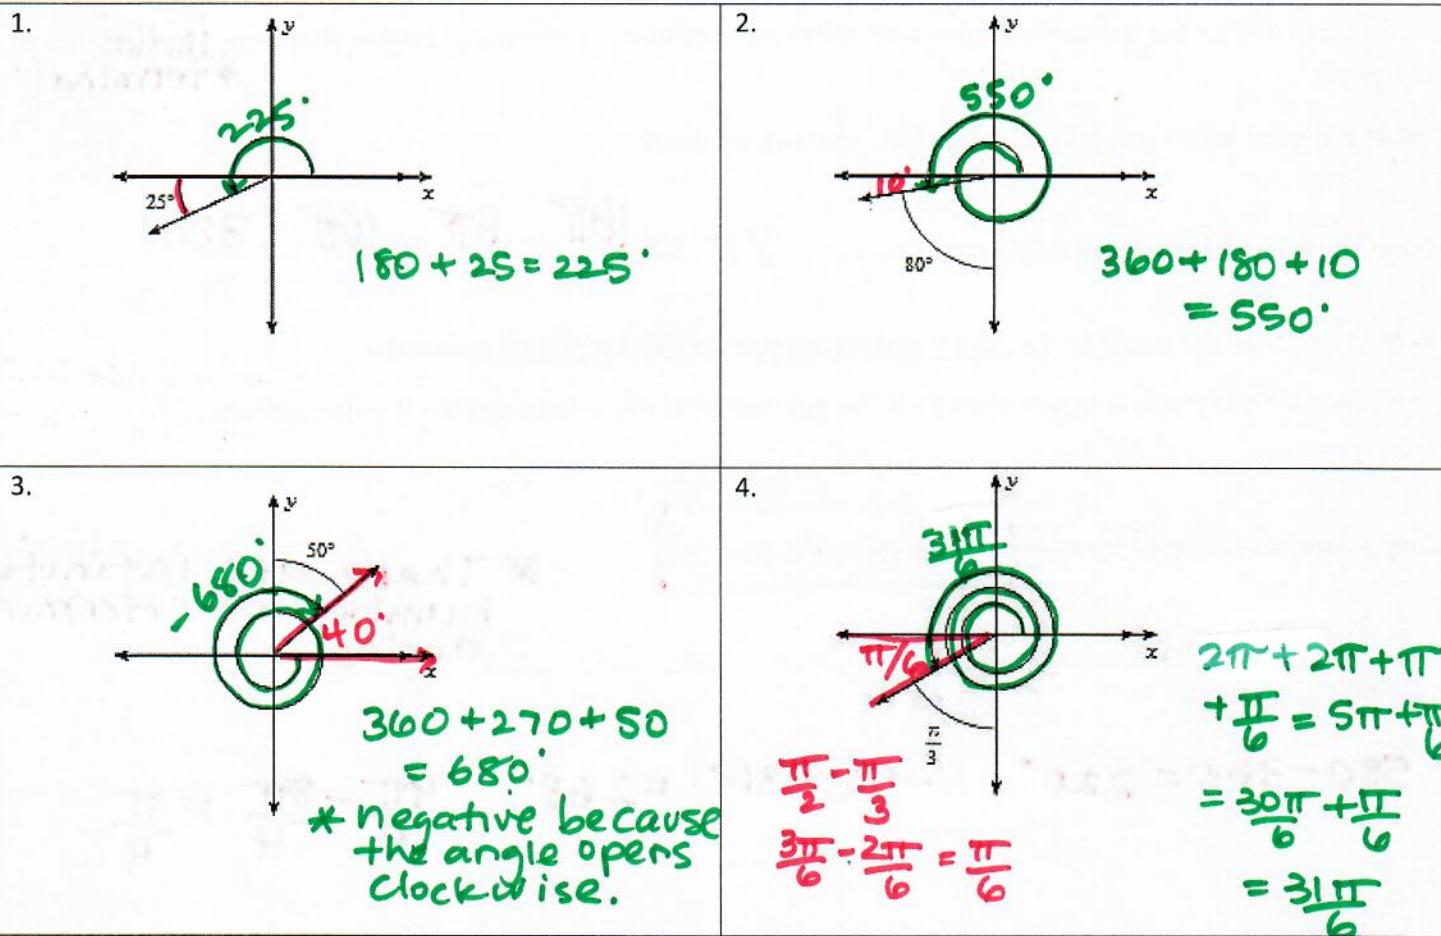

6.  $\frac{67\pi}{18}$

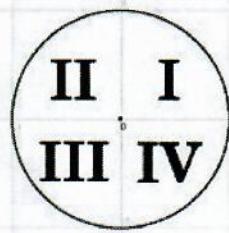

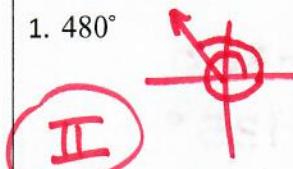

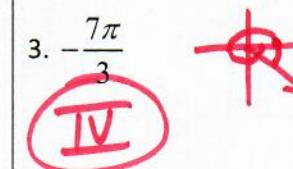

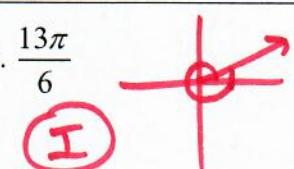

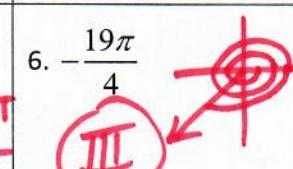

### C. Measures of Angles

Find the measure of each angle and then find the reference angle.

### D. Determine the quadrant of each angle.

	1. $480^\circ$  <b>II</b> $480 - 360 = 120$	2. $\frac{9\pi}{4}$  <b>I</b> $\frac{9\pi}{4} - 2\pi = \frac{\pi}{4}$ $\frac{9\pi}{4} - 8\pi = \frac{\pi}{4}$
3. $-\frac{7\pi}{3}$  <b>IV</b> $\frac{7\pi}{3} - 2\pi = \frac{\pi}{3}$	4. $-256^\circ$  <b>II</b>	
5. $\frac{13\pi}{6}$  <b>I</b> $\frac{13\pi}{6} - 2\pi = \frac{\pi}{6}$	6. $-\frac{19\pi}{4}$  <b>III</b> $\frac{19\pi}{4} - 4\pi = \frac{3\pi}{4}$	7. $\frac{24\pi}{6}$  <b>none</b>

### E. Finding coterminal angles between $0^\circ$ and $360^\circ$ or $0$ and $2\pi$ .

Watch youtube video : <https://www.youtube.com/watch?v=A8NoBcYQJ1U>

Coterminal angles are the same angles with different measures. Coterminal angles share the initial side of the angle.

initial  
terminal

What happens when you go around a circle more than once?

Fill in the blank to create an angle equal to  $2\pi$ .  $2\pi = \frac{16\pi}{8} = \frac{6\pi}{3} = \frac{10\pi}{5} = \frac{32\pi}{16}$

In fractions that are equal to  $2\pi$ , the numerator must be double the denominator.

You can tell if the angle is bigger than  $2\pi$  if the numerator is **more** than double the denominator.

Find a coterminal angle between  $0^\circ$  and  $360^\circ$  or  $0$  and  $2\pi$ .

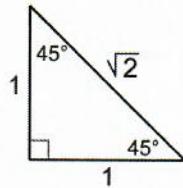

\* There are infinite number of coterminal angles

1. $580^\circ$ $580 - 360 = 220^\circ$	2. $-92^\circ$ $-92 + 360 = 268^\circ$	3. $\frac{9\pi}{4}$ $\frac{9\pi}{4} - \frac{8\pi}{4} = \frac{\pi}{4}$
4. $-\frac{2\pi}{3}$ $-\frac{2\pi}{3} + \frac{6\pi}{3} = \frac{4\pi}{3}$	5. $-225^\circ$ $-225 + 360 = 135^\circ$	6. $\frac{116\pi}{45}$ $\frac{116\pi}{45} - \frac{90\pi}{45} = \frac{26\pi}{45}$

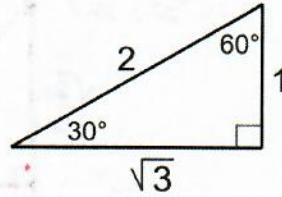

## SM2H 9.2 Notes – The Unit Circle

### Review Special Right Triangles

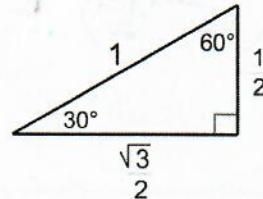

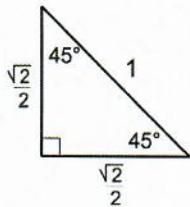

In a  $45^\circ - 45^\circ - 90^\circ$  triangle,  
the sides are in the ratio  $1:1:\sqrt{2}$ .

In a  $30^\circ - 60^\circ - 90^\circ$  triangle,  
the sides are in the ratio  $1:\sqrt{3}:2$ .

Now let's make the hypotenuse 1 so we'll be able to use the special right triangles in the Unit Circle. The Unit Circle is a circle where the radius is equal to 1 unit. Using the rules of special right triangles, the new side lengths are:

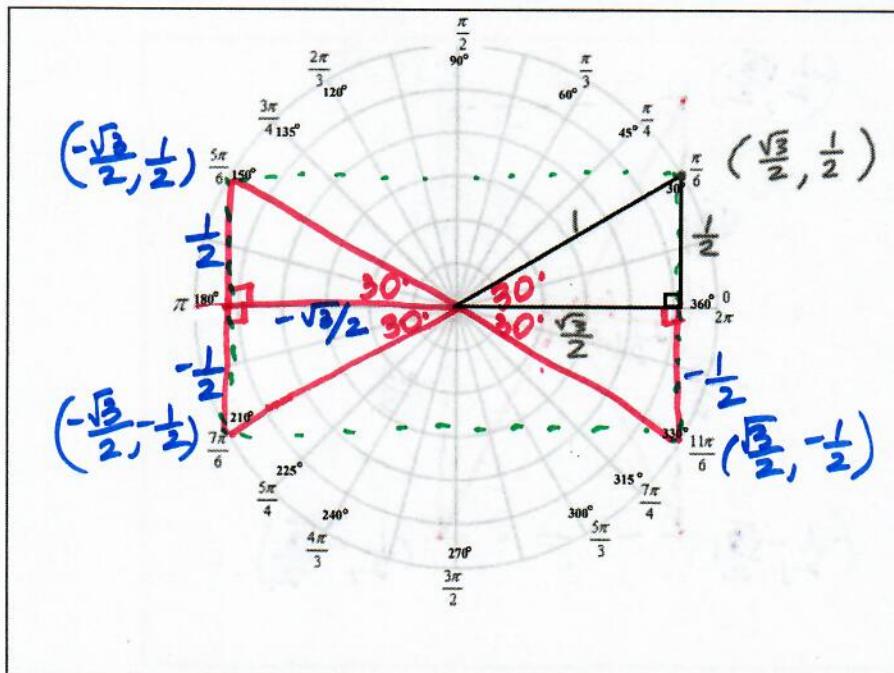

**\*\*Please watch this video on understanding the Unit Circle \*\***

<https://www.youtube.com/watch?v=n6L7VkdMv2g>

### The $30^\circ$ triangle in the Unit Circle:

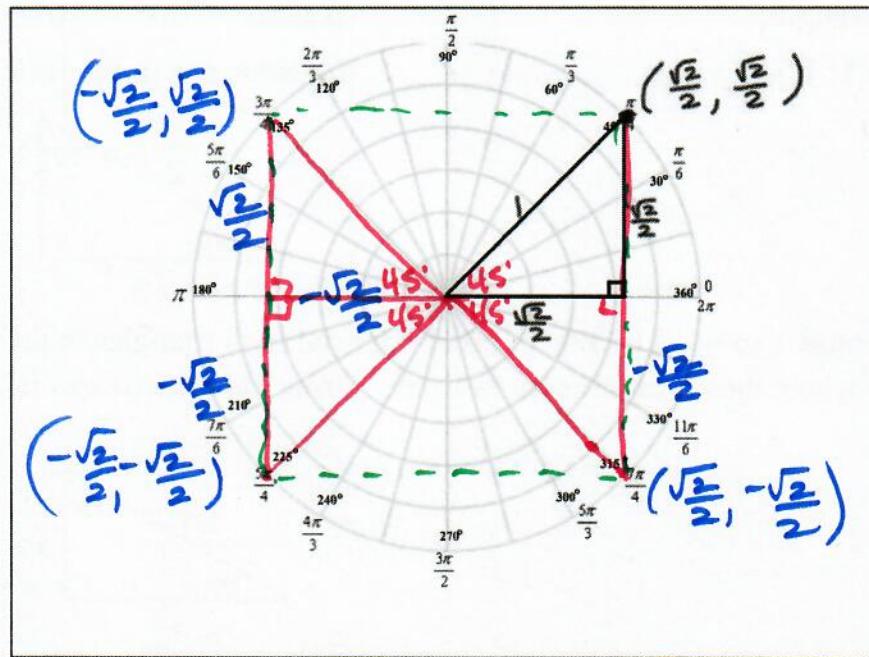

The above ratios of the  $30^\circ - 60^\circ - 90^\circ$  triangle were used to fill in the side lengths and coordinates of the  $30^\circ$  triangles in the Unit Circle.

Sketch in the other three  $30^\circ$  triangles (reference angles) including their side lengths and coordinates by reflecting the above triangle over the x and y axes. Draw a box connecting the coordinates to show that all of the coordinates are related.

## The $45^\circ$ triangle in the Unit Circle:

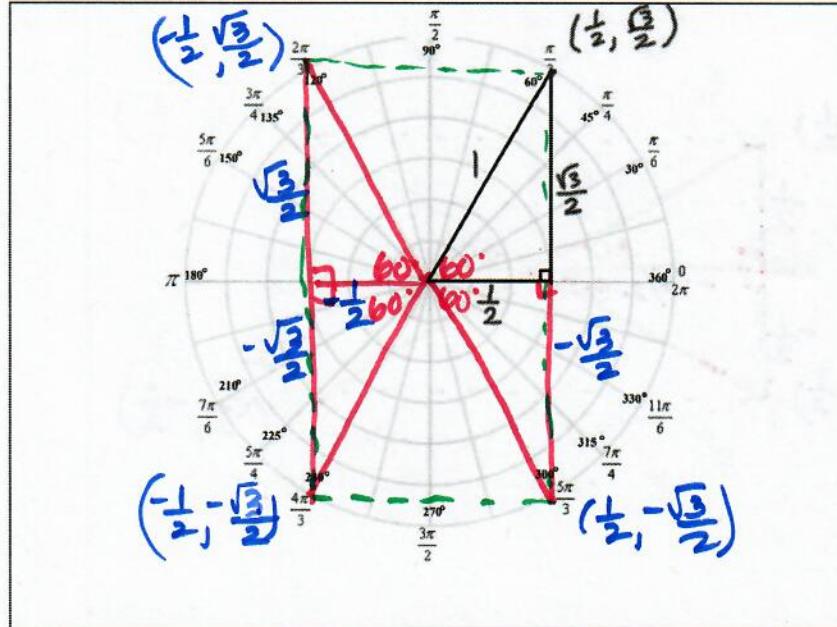

The above ratios of the  $45^\circ - 45^\circ - 90^\circ$  triangle were used to fill in the side lengths and coordinates of the  $45^\circ$  triangle in the Unit Circle.

Sketch in the other three  $45^\circ$  triangles (reference angles) including their side lengths and coordinates by reflecting the above triangle over the x and y axes. Draw a box connecting the coordinates to show that all of the coordinates are related.

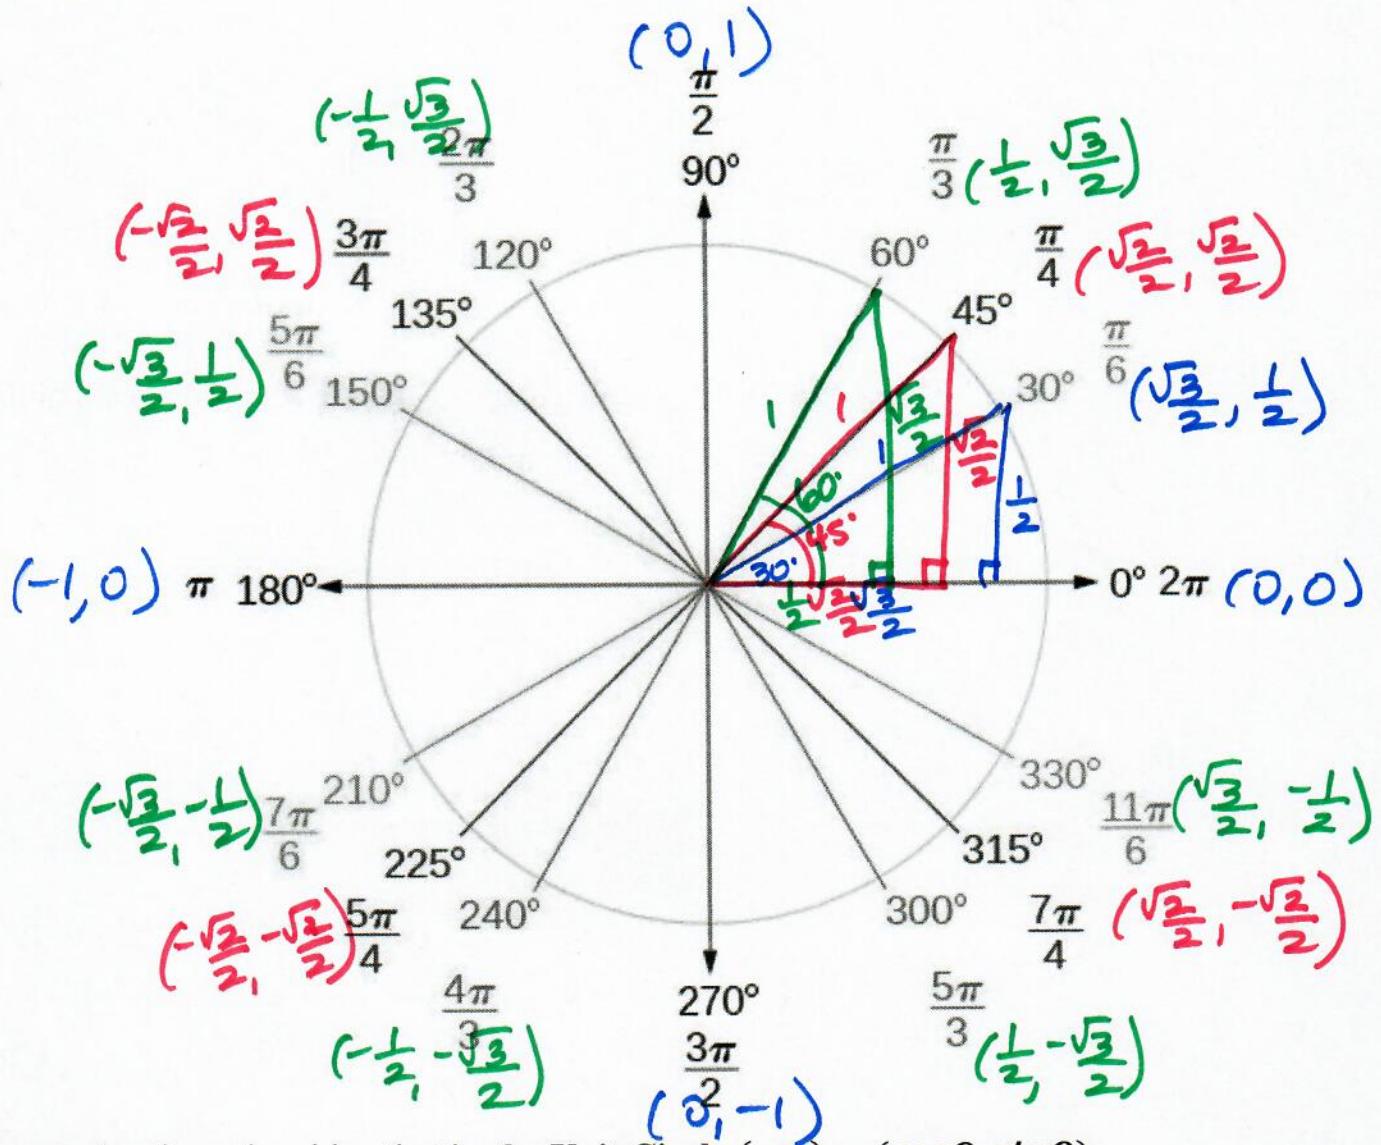

## The $60^\circ$ triangle in the Unit Circle:

The above ratios of the  $30^\circ - 60^\circ - 90^\circ$  triangle were used to fill in the side lengths and coordinates of the  $60^\circ$  triangle in the Unit Circle.

Sketch in the other three  $60^\circ$  triangles (reference angles) including their side lengths and coordinates by reflecting the above triangle over the x and y axes. Draw a box connecting the coordinates to show that all of the coordinates are related.

Fill in the coordinates of the first quadrant of the Unit Circle and then reflect those coordinates over the x and y axes to find the coordinates of all the other angles on the unit circle.

Remember from the video that in the Unit Circle  $(x, y) = (\cos\theta, \sin\theta)$

$$x = \cos\theta \quad y = \sin\theta \quad \frac{y}{x} = \tan\theta = \frac{\sin\theta}{\cos\theta}$$

Using the Unit Circle find the exact value of:

*no decimals! no calculators!*

a)  $\cos 60^\circ = \frac{1}{2}$

d)  $\sin 270^\circ = -1$

g)  $\tan \frac{2\pi}{3} = \frac{\sqrt{3}}{-\frac{1}{2}}$

$$= \frac{\sqrt{3}}{2} \cdot -\frac{2}{1} = -\frac{2\sqrt{3}}{1} = -2\sqrt{3}$$

h)  $\tan 90^\circ = \frac{1}{0} = \text{undefined}$

b)  $\sin \frac{4\pi}{3} = -\frac{\sqrt{3}}{2}$

e)  $\cos \frac{5\pi}{4} = -\frac{\sqrt{2}}{2}$

c)  $\tan 45^\circ =$

$$\frac{\frac{\sqrt{2}}{2}}{\frac{\sqrt{2}}{2}} = 1$$

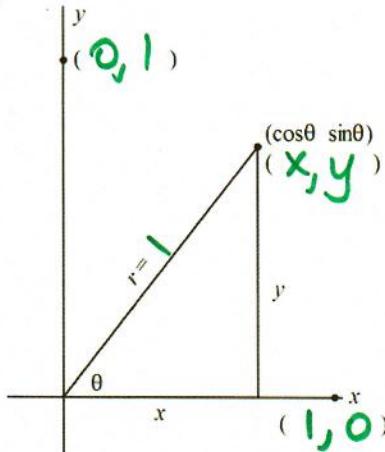

f)  $\tan \frac{\pi}{6} = \frac{1}{2}$

$$= \frac{1}{2} \cdot \frac{\sqrt{3}}{3} = \frac{1}{2} \cdot \frac{\sqrt{3}}{\sqrt{3}} = \boxed{\frac{\sqrt{3}}{3}}$$

i)  $\tan \frac{7\pi}{6} = -\frac{1}{2}$

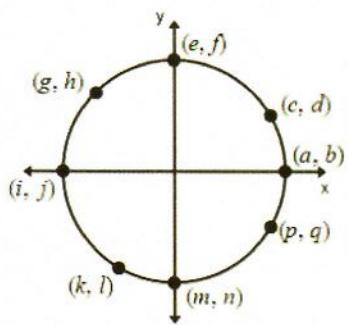

$$= -\frac{1}{2} \cdot \frac{\sqrt{3}}{\sqrt{3}} = -\frac{1}{2} \cdot \frac{\sqrt{3}}{\sqrt{3}} = \boxed{\frac{\sqrt{3}}{3}}$$

## SM2H 9.3 Notes Using the Unit Circle

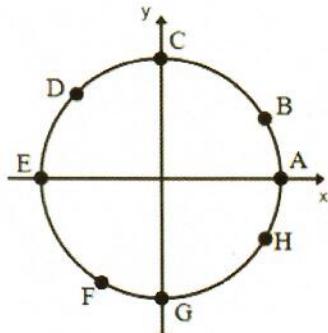

$$\begin{array}{ll} \cos \theta = x & \sec \theta = \frac{1}{x} \\ \sin \theta = y & \csc \theta = \frac{1}{y} \\ \tan \theta = \frac{y}{x} & \cot \theta = \frac{x}{y} \end{array}$$

Refer to the diagram below. Give the letter or letters that could stand for the function value.

- |                             |          |                            |          |                            |          |
|-----------------------------|----------|----------------------------|----------|----------------------------|----------|

# The Unit Circle

Positive: sin, csc

Negative: cos, tan, sec, cot

Use the unit circle to find the exact value of each trigonometric function.

1.  $\sin 30^\circ$

$$\frac{1}{2}$$

2.  $\cos 30^\circ$

$$\frac{\sqrt{3}}{2}$$

3.  $\tan 30^\circ$

$$\frac{\frac{1}{2}}{\frac{\sqrt{3}}{2}} = \frac{1}{2} \cdot \frac{2}{\sqrt{3}} = \frac{1}{\sqrt{3}} \cdot \frac{\sqrt{3}}{\sqrt{3}} = \boxed{\frac{\sqrt{3}}{3}}$$

4.  $\csc 30^\circ$

$$\frac{1}{\sin 30^\circ} = \frac{1}{\frac{1}{2}} = 1 \cdot \frac{2}{1} = \boxed{2}$$

5.  $\sec 30^\circ$

$$\frac{1}{\cos 30^\circ} = \frac{1}{\frac{\sqrt{3}}{2}} = 1 \cdot \frac{2}{\sqrt{3}} = \frac{2}{\sqrt{3}} \cdot \frac{\sqrt{3}}{\sqrt{3}} = \boxed{\frac{2\sqrt{3}}{3}}$$

6.  $\cot 30^\circ$

$$\frac{\frac{\sqrt{3}}{2}}{\frac{1}{2}} = \frac{\sqrt{3}}{2} \cdot \frac{2}{1} = \boxed{\sqrt{3}}$$

7.  $\cos \frac{5\pi}{6}$

$$-\frac{\sqrt{3}}{2}$$

8.  $\csc \frac{3\pi}{2}$

$$\frac{1}{\sin \frac{3\pi}{2}} = \frac{1}{-1} = \boxed{-1}$$

$$\frac{\frac{\sqrt{3}}{2}}{\frac{1}{2}} = \frac{\sqrt{3}}{2} \cdot -\frac{2}{1} = \boxed{-\sqrt{3}}$$

10.  $\tan 90^\circ$

$$\frac{y}{x}$$

$\frac{1}{0}$  = undefined

11.  $\sec \frac{5\pi}{3}$

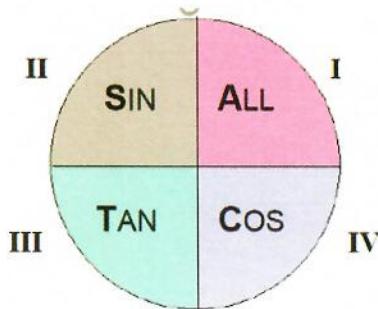

$$\frac{1}{\cos \frac{5\pi}{3}} = \frac{1}{\frac{1}{2}} = 1 \cdot \frac{2}{1} = \boxed{2}$$

12.  $\cot \frac{\pi}{2}$

$$\frac{x}{y}$$
  

$$\frac{0}{1} = \boxed{0}$$

Signs of the Trig Functions: Where are the trig functions Positive?

degree measures

Find the exact measures of the angles  $[0^\circ, 360^\circ]$  using the unit circle.

1.  $\sin \theta = \frac{\sqrt{3}}{2}$

$60^\circ, 120^\circ$

2.  $\tan \theta = 0^\circ$

$y$  where are  
 $x$  y-values 0?  
 $0^\circ, 180^\circ$

3.  $\cos \theta = -\frac{\sqrt{2}}{2}$

$135^\circ, 225^\circ$

4.  $\sin \theta = -1$

$270^\circ$

## SM2H Notes 9.4 Trigonometric Identities

### Trigonometry Function Identities

#### Quotient Identities

$$\tan \theta = \frac{\sin \theta}{\cos \theta}$$

$$\cot \theta = \frac{\cos \theta}{\sin \theta}$$

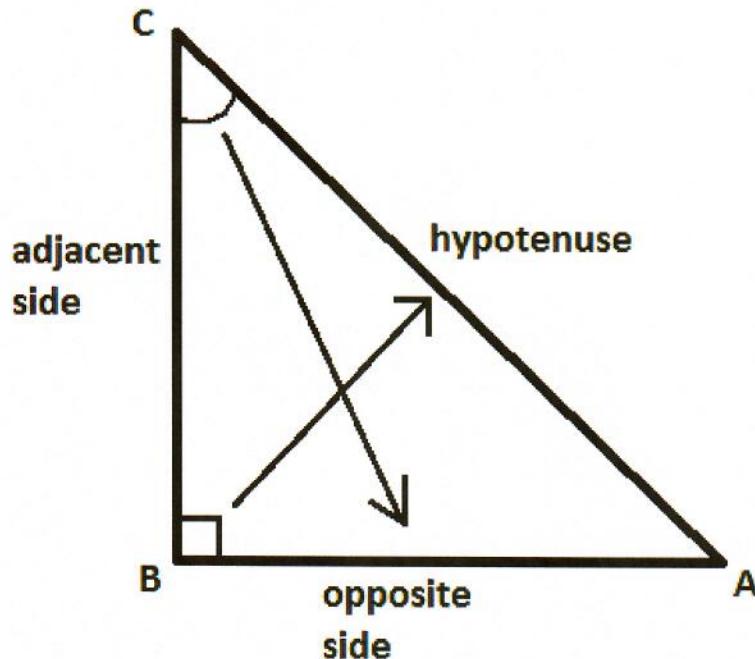

#### Reciprocal Identities

$$\sin \theta = \frac{1}{\csc \theta} \quad \csc \theta = \frac{1}{\sin \theta}$$

$$\cos \theta = \frac{1}{\sec \theta} \quad \sec \theta = \frac{1}{\cos \theta}$$

$$\tan \theta = \frac{1}{\cot \theta} \quad \cot \theta = \frac{1}{\tan \theta}$$

### SOH CAH TOA

$$\sin c = \frac{\text{opposite}}{\text{hypotenuse}} =$$

$$\cos c = \frac{\text{adjacent}}{\text{hypotenuse}}$$

$$\tan c = \frac{\text{opposite}}{\text{adjacent}} =$$

$$\cot c = \frac{\text{adjacent}}{\text{opposite}} :$$

$$\sec c = \frac{\text{hypotenuse}}{\text{adjacent}}$$

$$\csc c = \frac{\text{hypotenuse}}{\text{opposite}}$$

### Review

1. Multiply  $\frac{3}{4} \cdot \frac{1}{5} = \boxed{\frac{3}{20}}$

2. Add  $\frac{3}{8} + \frac{5}{6}$

$$\frac{9}{24} + \frac{20}{24} = \boxed{\frac{29}{24}}$$

3. Divide  $\frac{8}{25} \div \frac{2}{5}$

$$\frac{4}{5} \cdot \frac{5}{2} = \boxed{\frac{4}{5}}$$

Prove the identities, using opposite, adjacent, and hypotenuse.

$$4. \sin \theta = \frac{1}{\csc \theta}$$

$$\begin{aligned}\frac{\text{opp}}{\text{hyp}} &= \frac{1}{\csc \theta} \\ &= 1 \cdot \frac{\text{opp}}{\text{hyp}} \\ \frac{\text{opp}}{\text{hyp}} &= \frac{\text{opp}}{\text{hyp}}\end{aligned}$$

$$5. \tan \theta = \frac{\sin \theta}{\cos \theta}$$

$$\begin{aligned}\frac{\text{opp}}{\text{adj}} &= \frac{\frac{\text{opp}}{\text{hyp}}}{\frac{\text{adj}}{\text{hyp}}} \\ &= \frac{\text{opp}}{\text{hyp}} \cdot \frac{\text{hyp}}{\text{adj}} \\ \frac{\text{opp}}{\text{adj}} &= \frac{\text{opp}}{\text{adj}}\end{aligned}$$

Write each expression in terms of sine and/or cosine, then simplify.

$$6. \sec x \cdot \sin x$$

$$\frac{1}{\cos x} \cdot \sin x = \frac{\sin x}{\cos x} = \boxed{\tan x}$$

$$7. \frac{\tan x}{\sin x}$$

$$\begin{aligned}\frac{\frac{\sin x}{\cos x}}{\sin x} &= \frac{\sin x}{\cos x} \cdot \frac{1}{\sin x} = \frac{1}{\cos x} \\ &= \boxed{\sec x}\end{aligned}$$

Prove the trigonometric identities.

$$8. \cos x \cdot \sec x = 1$$

$$\cos x \cdot \frac{1}{\cos x}$$

$$9. \cos \theta \cdot \csc \theta = \cot \theta$$

$$\cos \theta \cdot \frac{1}{\sin \theta}$$

$$\frac{\cos x}{\cos x}$$

$$1 = 1$$

$$\frac{\cos \theta}{\sin \theta}$$

$$\cot \theta = \cot \theta$$

## SM2H Notes 9.5 Trigonometric Identities Day 2

### Review Concepts

$$1. \frac{1}{3} \cdot \frac{1}{5} = \boxed{\frac{1}{15}}$$

$$2. (x+6)(x-6) \\ x^2 - 6x + 6x - 36 \\ x^2 - 36$$

$$3. \frac{y}{x} \cdot \frac{3}{x} + \frac{5}{y} \cdot \frac{x}{x} \\ \frac{3y}{xy} + \frac{5x}{xy} = \boxed{\frac{3y+5x}{xy}}$$

$$4. \sin x + \sin x = \\ \boxed{2\sin x}$$

$$5. \sin x \cdot \sin x = \\ \boxed{\sin^2 x}$$

$$6. (1 - \cos x)(1 + \cos x) = \\ 1 + \cos x - \cos x - \cos^2 x \\ \boxed{1 - \cos^2 x}$$

$$7. \tan^2 x = \tan x \cdot \tan x \text{ so } \tan x \cdot \tan x = \frac{\sin x \cdot \sin x}{\cos x \cdot \cos x} \text{ or } \tan^2 x = \frac{\sin^2 x}{\cos^2 x}$$

### Factor out the GCF

$$8. 5x^3 - 25x^2 + 5x$$

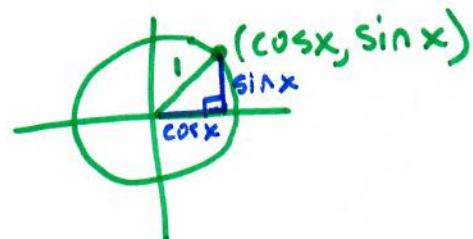

$$\boxed{5x(x^2 - 5x + 1)}$$

$$9. \sin^2 x + \sin x$$

$$\boxed{\sin x(\sin x + 1)}$$

The Pythagorean Identity:  
 $\sin^2 x + \cos^2 x = 1$

$$\sin^2 x + \cos^2 x = 1$$

If we divide each term of the fundamental identity by  $\sin^2 x$  or  $\cos^2 x$ , we can derive two more identities. These are called Pythagorean Identities because they are related to the Pythagorean Theorem:

$$\frac{\sin^2 x}{\sin^2 x} + \frac{\cos^2 x}{\sin^2 x} = \frac{1}{\sin^2 x}$$

$$1 + \cot^2 x = \csc^2 x$$

$$\frac{\sin^2 x}{\cos^2 x} + \frac{\cos^2 x}{\cos^2 x} = \frac{1}{\cos^2 x}$$

$$\tan^2 x + 1 = \sec^2 x$$

You can rewrite the Pythagorean Identities by using the addition property of addition and subtraction.

$$\sin^2 x + \cos^2 x = 1$$

$$1 + \cot^2 x = \csc^2 x$$

$$\tan^2 x + 1 = \sec^2 x$$

$$\begin{aligned}\sin^2 x &= 1 - \cos^2 x \\ \cos^2 x &= 1 - \sin^2 x\end{aligned}$$

$$\begin{aligned}1 &= \csc^2 x - \cot^2 x \\ \cot^2 x &= \csc^2 x - 1\end{aligned}$$

$$\begin{aligned}\tan^2 x &= \sec^2 x - 1 \\ 1 &= \sec^2 x - \tan^2 x\end{aligned}$$

### A General Strategy for Proving Identities

1. Work on the more complicated side first.
2. Rewrite the side you are working with in terms of sines and cosines only.
3. Multiply the numerator and denominator of one rational expression by either the numerator or denominator of the other.
4. Write a single rational expression as a sum of two rational expressions.
5. Combine a sum of two rational expressions into a single rational expression.
6. If both sides simplify to a third expression, then the equation is an identity.
7. NO solving (NO whatever you do to one side do to the other)

Prove each identity.

$$1. \frac{\tan x}{\sin x} = \sec x$$

$$\begin{aligned} & \frac{\frac{\sin x}{\cos x}}{\sin x} \\ & \frac{\sin x}{\cos x} \cdot \frac{1}{\sin x} \\ & \frac{1}{\cos x} \\ & \sec x = \sec x \end{aligned}$$

$$2. \sin x + \sin x \cdot \cot^2 x = \csc x$$

$$\begin{aligned} & \frac{\sin x + \sin x \cdot \frac{\cos^2 x}{\sin^2 x}}{\sin x} \\ & \frac{\sin x \cdot \sin x + \frac{\cos^2 x}{\sin x}}{\sin x} \\ & \frac{\sin^2 x + \cos^2 x}{\sin x} \\ & \frac{1}{\sin x} \\ & \csc x = \csc x \end{aligned}$$

$$3. \sin \theta \cdot \cos \theta \cdot \tan \theta = 1 - \cos^2 \theta$$

$$\begin{aligned} & \frac{\sin \theta \cdot \cos \theta \cdot \frac{\sin \theta}{\cos \theta}}{\cos \theta} \\ & \sin^2 \theta \\ & 1 - \cos^2 \theta = 1 - \cos^2 \theta \end{aligned}$$

$$4. \cos x + \sin x \cdot \tan x = \sec x$$

$$\begin{aligned} & \frac{\cos x + \sin x \cdot \frac{\sin x}{\cos x}}{\cos x} \\ & \frac{\cos x \cdot \cos x + \frac{\sin^2 x}{\cos x}}{\cos x} \\ & \frac{\cos^2 x + \sin^2 x}{\cos x} \\ & \frac{1}{\cos x} \\ & \sec x = \sec x \end{aligned}$$

$$5. \frac{\sin x}{\sin x + 1 + \cos x} + \frac{1 + \cos x}{\sin x + 1 + \cos x} \csc x$$

$$6. \frac{\sin^2 x}{\cos x} = \sec x - \cos x$$

$$\begin{aligned} & \frac{\sin^2 x}{\sin x(1 + \cos x)} + \frac{1 + 2\cos x + \cos^2 x}{\sin x(1 + \cos x)} \\ & \cancel{\frac{\sin^2 x + 1 + 2\cos x + \cos^2 x + 1}{\sin x(1 + \cos x)}} \end{aligned}$$

$$\begin{aligned} & \frac{1 - \cos^2 x}{\cos x} \\ & \frac{1}{\cos x} - \frac{\cos^2 x}{\cos x} \\ & \sec x - \cos x = \sec x - \cos x \end{aligned}$$

$$\frac{2 + 2\cos x}{\sin x(1 + \cos x)}$$

$$\frac{2(1 + \cos x)}{\sin x(1 + \cos x)}$$

$$\frac{2}{\sin x}$$

$$2 \cdot \frac{1}{\sin x} \rightarrow 2 \csc x = 2 \csc x$$
